

Dear ProControl User,

In Appendix B on page 207 of the ProControl User's Guide, there is a diagram of the audio output pinouts for the 25 pin D-sub connector labeled AUDIO OUTPUT. Prior to serial number NX 01801(released June 2000), there were errors in that information, requiring modifications be made to correct the polarity of the Control Room Outs, Slate (dub) Outs and Control Rooms Alt Outs.

If the serial number of your ProControl Main Unit precedes NX01801, please refer to the "Addendum to ProControl User's Guide" for information and documentation relating to that issue. This document is available from the Digi website and was shipped with your ProControl unit.

If the serial number of your unit is later than NX01801, the information contained in the Pro Control User's Guide can be considered accurate, and no additional modification is necessary.

If you have any question regarding this issue, please contact your local Digidesign office. We regret any inconvenience this may have caused you and we thank you for your continued support of the Digidesign ProControl system.

Sincerely,

The ProControl Team
