

# Release Notes for USD Setup

Build Date: 1/3/2001  
File: USD Setup PPC (a Macintosh application)  
Application Version: 5.0.2  
Embedded Firmware Version: 5.0.1

## NOTES

- USD Setup is now a PowerPC native application. It will not operate on 68K Macintoshes. If you need to run on a 68K machine, you can continue to use version 5.0.1 of USD Setup.
- The firmware data contained within this application, used for downloading to the USD hardware, remains unchanged. It remains at version 5.0.1

## BUGS FIXED

- USD Setup is now fully functional with the following 3<sup>rd</sup> party serial ports:
  - Griffin Technology G4Port
  - GeeThree.com, Stealth serial port for G4
- USD Setup is now fully functional with the following 3<sup>rd</sup> party USB-to-serial adapter devices:
  - Keyspan, model USA-28X Twin Serial Adapter

## NEW FEATURES

- A progress bar is now provided during USD firmware downloading.
